

Software Development That Solves Business Problems

We created TriHelix Software to address core business needs of any sized company needing to leverage software to scale a company or division. Our team is comprised of industry veterans with experience well beyond software development. Our experience is our difference.

Custom Software Development

Developing great software starts with understanding what it must do. Our background is in process engineering and execution, so we have the experience needed to design solutions that anticipate future needs and business expansion.

Web Application Development

Websites are not created equally. Visitors today are sophisticated and expect a seamless and easy-to-use online experience not simple static pages. Interactive portals providing access to privileged information, transactional systems and real-time dashboards are now expected.

Mobile App Development

Speed, security and robust features make mobile apps one of the hottest areas in software because more work is being pushed from laptops to phones. Developing for mobile is about understanding how users interact with data and features. Too much results in battery drain and too little makes it useless.

Branding

Developing great software starts with understanding what it must do. Our background is in process engineering and execution, so we have the experience needed to design solutions that anticipate future needs and business expansion.

UI and UX Design

User interface is a major reason why some apps get used and others are abandoned. Our designers take a business approach by understanding the process flow users need to follow to get the most from your system. User experience is part art and part science making it one of the most critical components of the architecture.

Experience is Critical When Doing Business Online

TriHelix is a collection of software industry veterans who are passionate about creating effective tools to help realize business objectives and maximize profits, while securing customer information.

B2B and B2C E-Commerce

Online stores, auctions, marketplaces and trading platforms all require real-time reporting, customizable e-commerce solutions and TriHelix has the experience to design, build and support state-of-the-art systems to support inventory, ordering, accounting and ever other aspect of online commerce.

Online Portals and Communities

Static websites are great for marketing however, visitors today are more sophisticated and expect a personalized experience designed to address their specific needs. Whether the need is to communicate, update process flow, transact or facilitate, TriHelix has built portals that will securely tailor an experience for that individual user.

SEO, SEM and Monitoring

Search engine optimization has been around since 1990 but it has changed dramatically and continues to evolve every year. Doing the same thing you did only one year ago could hurt your page rank more then in helps. We focus on keeping up with the latest standards on all fronts and actively monitor our client's activity against the changes in algorithms.

Business Intelligence

Enterprise-wide reporting and business performance management tools can improve your business, increase productivity, and optimize business operations at every level. Get the most out of online analytical processing, big data, benchmarking, and business process management with the help of our experts.

Startup IT Services and Solutions

TriHelix is an investment company that started a software company to help address the needs of startups because we see the world through the eyes of anyone who is funding your venture. Our startup IT services aim at helping early stage companies accomplish their goals through product ideation, prototyping, software development, testing and maintenance. MVPs!

TriHelix is Enterprise Tested and Proven

We have significant experience with enterprise wide processes, architecture, and applications. We help you optimize business outcomes.

Enterprise Software Development

When it's time to develop new enterprise software, planning, design, process-flow, architecture and integrations are just the beginning of what it takes to get it right. TriHelix has the experience and track record you can count on to be your enterprise software partner.

Enterprise Mobility

We will help you create dependable mobility roadmaps and transform your enterprise software into fully functional mobile suites using the latest and most secure cloud technologies. Our experienced team assesses your current and future needs, designs, builds, deploys and supports your next generation of enterprise infrastructure.

Software Modernization

TriHelix has significant experience turning legacy software into an asset that can work for you for many years without the need to perform a full software replacement. Many software platforms are too difficult or expensive to completely replace so working with the database and user-interface may be a better alternative. Our team of experts can offer a consultative approach to making that decision.

Cloud Computing

Cloud computing solutions create a scalable, flexible, and connected enterprise environment with tremendous power. Our experience offers you the ability to leverage all that the cloud has to offer without running into the pitfalls associated with first-time or early cloud deployments.

IT Consulting/Product Strategy

Static websites are great for marketing however, visitors today are more sophisticated and expect a personalized experience designed to address their specific needs. Whether the need is to communicate, update process flow, transact or facilitate, TriHelix has built portals that will securely tailor an experience for that individual user.

TriHelix is Your Partner for the Future

We continuously look out into the future to see where the technology is headed to leverage it to your best advantage. That said, we aim to be on the leading edge in deployment, not the bleeding edge.

Blockchain Development

Blockchain technologies are very popular and the promise of secure encrypted and immutable data libraries has the world excited. As you work with blockchain please add TriHelix to your team as we have been working with the technology for as long as anyone in the industry and can offer you a level-headed approach to uses for business applications.

Internet of Things

Secure IoT solutions gather data, optimize key processes, and improve decision making across the span of accessible devices. As IoT solutions get better, the possibilities are very promising; partner with TriHelix as your IoT research and development team – We work with you to accomplish your mission.

AI and Automation Solutions

Artificial Intelligence and learning systems can be a game changer for your company when implemented correctly and managed by a team of qualified operators. We are led by someone with nearly 30 years of enterprise resource planning design and implementation. ERP is the predecessor of AI in software and our experience will help you get ahead in automation and algorithmic technologies.

Product Lifecycle Management Services

All software has a lifecycle that will be influenced as much by outside factors as those you have control over. TriHelix works with our clients to provide a deep view of the software industry because we keep current with developments in platform development technologies, commerce, legal, banking and more we become part of your team and help plan for lifecycle needs over time.

Dedicated Development Team

We have been saying “by your side but not on your payroll” for over 25 years and that short phrase has become synonymous with our long-term partnership approach. We believe in lifecycle partnerships that start with design and develop and move to service and support Dedicated teams can be full-time for a period or fractional so that you’re getting the right skills for each project when they are needed.
